Italian

beginner - good comprehension and reading, medium speaking, poor writing

French

beginner - good comprehension and reading, medium speaking, poor writing

Work Experience:

- Company: Savedo
Website: <https://www.savedo.de/>
Location: Berlin - Germany
Working Time: August, 2015 to present
Function: Front End Developer
About: Savedo is one fintech startup, part of Finleap/Hitfox Group.
It provides investment products for Germans to invest in other banks through Europe.
I was hired when the company were in their first year and it was amazing to see the company growth and help them in it.
Activities: Development of a full front-end application to interact with a back-end API. Application was built with Angular 1.0 and Ionic built over Typescript, using modern patterns and technologies.
Architecture of APIs and micro-services to provide data for the application.
Ruby on Rails development of back-end and marketing website
- Company: Element Wave
Website: <http://www.elementwave.com/>
Location: Galway - Ireland
Working Time: January, 2015 to August, 2015
Function: Software Developer
About: Element Wave is a product from Element Software.
It's a SDK and API for mobile applications that allows the programmers and companies trace their apps, getting informations as time of usage, locations, custom events and - specially - send push notifications for the users. At the time I started working there, it was a company with only 7 employees.
As a potential start-up with a great idea, the job was challenging and fun.
Activities: Backend JavaScript developing with nodejs.
Frontend JavaScript developing with Angular JS.
Database communication with Couchbase and Elastic Search.
- Company: Platypus (own company)
Website: <http://www.platypusweb.com.br/>
Location: São Paulo - Brazil
Working Time: March, 2013 to present
Function: self-employed
About: Platypus is my own company for developing freelance projects for some clients that already knew my work
Activities: **Development of mobile applications using Ionic Framework:**
Ionic Framework is a javascript framework based in Cordova/Phonegap and AngularJS that converts web applications in mobile apps.
When working on these projects, I had a strong contact with AngularJS, Cordova libraries and used PHP to build server-side webservices as well.
Development of PHP websites:
MVC websites built with PHP, with strong usage of LAMP environment - Linux, Apache, MySQL and PHP.

Some projects needed some acknowledgments on frameworks such as Zend. However, I've built my own object-oriented MVC framework from scratch, so I am really comfortable working with pure PHP code as well.

Apache and server configuration necessary.

Strong capabilities of JavaScript and libraries such as JQuery and AngularJs.

Used front-end technologies as well, such as HTML5 and Twitter Bootstrap.

A Ruby on Rails project was also developed. Language was deeply studied and other technologies were also used, such as GitHub and Heroku infrastructure.

Development of android applications:

Two android applications were built, both of them involved media streaming. One was for using VLClib for a MPEG2 movie broadcast and the other one was to make the app communicate with a Chromecast device. Both of them required strong skills in Android development and capabilities of work alone, integrating with already existing projects.

Development of Java projects:

Worked on different Java Projects, especially one as part of a strong team that developed a whole e-commerce integrating with already-existing systems and databases from Editora Globo, a huge magazine company in Brazil. Other projects included a bar-administrator system, integrated with pre-existing MySQL database, built from a legacy code, that required to work by myself.

Company:	Botecaria (own company)
Website:	http://www.botecaria.com.br/
Location:	São Paulo - Brazil
Working Time:	January, 2013 to present
Function:	Co-owner
About:	Botecaria is a beer distribution company in activity in Brazil. Although not computer-related, I had a hard work of starting a company from scratch, learning a lot about management, economy, project building, taxes, hiring and everything else that is necessary for rising a startup. I'm a co-owner, part of a team of five people, and had worked a lot in the beginning of the company, until it could keep alive without my presencial work there.
Activities:	All infrastructure and technical dependencies on the company. Management and employee hiring. Rising a startup. Although not fully active, I still have part of the company and can help in some decisions.

Company:	Aprimo - Teradata
Website:	http://www.aprimo.com/
Location:	London - UK
Working Time:	November, 2011 to September, 2012
Function:	Technical Consultant
About:	Aprimo is a Integrated Marketing Management Software,

customizable, with different modules to manage branding campaigns and centralize marketing assets in a library that's accessible through a web portal.

Activities: Customer Support
Developing customizations for companies
Experience working with Aprimo proprietary API
Development in .NET C#
Use of MSSQL database

Company: Easypay
Website: <http://www.easypay.pt/>
Location: Lisbon - Portugal
Working Time: March, 2011 to September, 2011
Function: Developer and Technical Consultant
About: Easypay is a company that offers an API for online payments.
Activities: Customer Support
Communication with clients that were implementing our solution
Development of simples systems using PHP and mySQL, integrating them with the API of EasyPay

Company: LabOne Systems S/A
Website: <http://www.labone.net>
Location: São Paulo - SP - Brasil
Working Time: October, 2008 to January, 2011
Function: Developer and Project Manager
About: LabOne is a software company focused on digital media applications. It had about 40 employees, but it is growing fast and strongly. The company was the developer of Sonora, the biggest music website in Latin America at the time I worked there.
Activities: Project development using such technologies as C#, JavaScript, .NET, Java, Monotouch
Extensive experience modeling relational databases and object-oriented systems
Experience in javascript using jquery libraries
Experience in Google maps API
Experience as a project and team leader
Development of mobile applications using Apple SDK, Objective C and monotouch.

Company: EWTI - Engenharia de Web
Website: <http://www.ewti.com.br>
Location: São Paulo - SP - Brasil
Working Time: April, 2006 - September, 2008
Function: Software developer
About: EWTI is a small software company located in the center of São Paulo City. In spite of its size (about 15 employees), the clients were always big companies that has found in EWTI good solutions for their problems.
Activities: Project development using such technologies as PHP, ASP, .NET and Java
Extensive experience modeling relational databases and

object-oriented systems
Extensive experience in databases management using MSSQL,
Oracle and, especially mySQL
